

Principles of Manufacturing – Light Saber Project

Students will take on a fun activity that will be engaging, but will ignite interest back into the Star Wars Saga if they had lost it. Students will walk away with their own light saber though not as powerful and dangerous as the Dorinian model used by Luke Skywalker. Students will learn skills in digital electronics, soldering, and engineering design to name a few. Students will look at Isometric, Oblique, Orthographic, multi-view drawings before completing this futuristic object.
